Icinga Advanced Training

Jesus Arley Quirós

participated in the specified training from April 28 to 30, 2025.

Throughout the program, the participant acquired comprehensive knowledge essential for managing large and complex environments. The training included in-depth discussions on Icinga 2 Clusters, covering various scenarios such as high availability and distributed monitoring. The entire training spanned 3 days, with each session providing a well-balanced mix of theoretical concepts and practical application, complemented by hands-on exercises.

TRAINING CONTENT

- Introduction to the Icinga project and monitoring in general
- Overview of the Icinga 2 setup
- Distributed monitoring and high availability
- Performance graphing
- Icinga 2 REST API
- Insight into Icinga Web 2
- Introduction to web-based configuration with the Director
- External events and log monitoring

All topics were covered within 3 days. The individual training units consist of a balanced mix of theory and practice, whereby the lessons are supplemented by hands-on exercises.
